

29/ Decl
8. Smith
7/2/04
Docket No. 95-004M
PATENT APPLICATION

I certify that on the date specified below this correspondence is being mailed as first-class mail, postage prepaid, addressed to Board of Patent Appeals and Interferences, United States Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313-1450.
4/27/04
Conrad O. Gardner

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicant: Conrad O. Gardner Group Art Unit: 3618
Application No.: 08/896,514 Examiner: A. Lerner
Filing Date: 06/23/97 Docket No.: 95-004M
Date:

For: Extended Range Motor Vehicle Having Ambient Pollution Processing

Board of Patent Appeals and Interferences
United States Patent and Trademark Office
P.O. Box 1450
Alexandria, VA 22313-1450

**DECLARATION UNDER 37 CFR 1.195
REGARDING PIONEER STATUS**

RECEIVED
2004 MAY -3 AM 9:04
BOARD OF PATENT APPEALS
AND INTERFERENCES

Sir:

This declaration regarding the system disclosed in the present application and parent continuation patents has gained "pioneer status due to the position occupied by the invention in the art to which it pertains or which it creates (See, *MAC Corp of America v. Williams Patent Crusher and Pulverizer Co.*, 767".

See also CHI Research Paper, "Pioneer Patents" which are heavily cited by later patents, Vol. IV. No. 1, March 1995.

A patent with large numbers of citations may be entitled to broader claims because it has greatly advanced the state of the art. For as Judge Brewer stated in *Westinghouse v. Boyden Power Brake Company*, May 9, 1898, "The very term, 'pioneer patent' signifies that the invention has been followed by others. A pioneer patent does not shut, but opens the door for subsequent inventions.

RECEIVED
MAY 10 2004
GROUP 3600

45

The attached listing of ~~53~~ patents cited by the Examiners of the U.S.P.T.O. regarding the present system clearly confirms pioneer status which opened the door for subsequent inventions.

37 CFR 1.195 states that declarations after the case has been appealed will not be admitted without a showing of good and sufficient reasons why they were not presented earlier. Applicant researched the present complete listing of cited patents as of March 14, 2004 during the time period for which a Reply Brief is due.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under 18 U.S.C. 1001, and that such willful statements may jeopardize the validity of the application or any patent issued thereon.

'Pioneer Patents' are Heavily Cited by Later Patents

In a series of published papers CHI has shown that technologically important patents tend to be much more highly cited than average patents. We have now extended that finding to legally important patents, by showing that patents designated as 'Pioneer patents' by the courts also tend to be much more highly cited than average patents. Furthermore, in a similar analysis we have found that patents in the National Inventors Hall of Fame are also cited much more than average.

Pioneer patents are patents which the courts have found to be so groundbreaking that they deserve a wide breadth of protection in constraining their claims and specifications. Hall of Fame patents are U.S. patents selected by a committee of representatives from national scientific and technical organizations.

The graph below shows the number of citations received since 1971 for Pioneer and Hall of Fame patents issued since 1960; the solid line shows the number of citations an average patent has received since 1971. (1971 is the first year that patent citation data are available in machine readable form.) All of the Hall of Fame patents, and all but two of the Pioneer patents have been cited more than expected, and several have been cited more than 20 times, including S.D. Stookey's 1960 patent "Method of making Ceramics and Product Thereof" with 96 citations since 1971. Stookey's patent has 93 more citations than the average 1960 patent and continues to be cited by recent patents, including 4 patents issued in 1994.

Further, we have found that the citations are rather evenly distributed among later patent years; the citations accrue steadily, and do not suddenly accumulate after a patent is designated as a Pioneer or Hall of Fame patent.

The summary histogram shows that on average, Pioneer patents are cited 6.6 times as frequently as expected, and Hall of Fame patents 6.3 times the expected rate.

Citation Indices for Selected Patents
Patents Granted 1960-94
Citations from 1971-94

The Implications

- This is further evidence that important patents tend to be highly cited by later patents.
- Citation analysis may provide solid evidence for use in patent infringement cases.
- A patent with large numbers of citations may be entitled to broader claims because it has greatly advanced the state of the art. For as Justice Brewer stated in *Westinghouse V. Boyden Power Brake Company* May 9, 1898, "The very term, 'pioneer patent' signifies that the invention has been followed by others. A pioneer patent does not shut, but opens the door for subsequent inventions."

About CHI Research

CHI Research is an internationally recognized research consultancy specializing in the development and analysis of technology, science, and financial indicators. CHI's indicators are used by corporate and public clients throughout the world. For more information about CHI, its services and products, please visit our Website: www.chiresearch.com, e-mail us: info@chiresearch.com, or fax the form below to request more information.

For More Information

If you would like additional information about CHI's products and services, please complete the form below and fax back to CHI, or e-mail your request to: info@chiresearch.com
